## 2. Variant Screening Pipeline

## Clinical Advisory Board

<b>Contact</b> Steve Twigg/Andrew Wilkie (Clinician) Research Consent - YES	<b>Gene: KCTD15</b> VUS(s): p.(Asn104His) Inheritance: De novo	<b>Gene Function and disease:</b> KCTD15 Inhibits AP2 transcriptional activity by interaction with its activation domain; has a role in defining the neural crest region. There is no current link to Mendelian disease.	<b>RANK:</b>  <b>Supporting information</b> There is a second family with de novo KCTD15 c.263G>A; p.Gly88Asp. Clinical features: sporadically affected proband presented at birth with a midline frontonasal mass. On review at the age of 15 years, she was noted to have thin, fair hair. KCTD15 Gly88Asp is in BTB domain and equivalent to KCTD1 Gly62Asp - previously reported to cause Scalp-ear-nipple (SEN) syndrome.
<b>Clinical Features</b> Father and daughter - with frontonasal lipoma, scalp defects, and congenital heart anomalies. <b>Father:</b> born with cutis aplasia of scalp and a large facial lipoma, to unaffected nonconsanguineous parents. He required surgery in infancy for tetralogy of Fallot and a hypoplastic urethra. <b>Daughter:</b> at birth prominent symmetrical mass extending from the forehead to the nasal bridge suggestive of a lipoma, and extensive cutis aplasia - posterior half of the scalp. PDA. Moderately-delayed expressive language skills, coordination difficulties and mild conductive hearing loss.	<b>Gene/variant metrics</b> PDI: 0.04; ClinVar: 0; ClinGen: 32	<b>Functional analysis:</b> Biophysical analyses showed that the Asp104His substitution resulted in a monomeric BTB domain likely to be partially unfolded at physiological temperatures. A crystal structure of the BTB domain variant Gly88Asp revealed an abnormal closed hexameric assembly.	<b>Submitter motivation:</b> Mouse generation would confirm pathogenicity and enable exploration of pathology. We have identified two families with frontonasal dysplasia (FND) that harbour de novo missense variants in the gene encoding potassium-channel tetramerisation domain-containing protein 15 (KCTD15). KCTD proteins form a large and understudied family defined by the presence of a BTB (Broad-complex, Tramtrack and Bric-a-brac) domain and have diverse functions including in DNA replication, transcriptional repression, protein degradation and hedgehog signalling. A disease association for KCTD15 has not previously been described, but heterozygous mutations in the highly homologous paralogue, KCTD1, cause scalp-ear-nipple (SEN) syndrome, characterised by cutis aplasia of the scalp and anomalies of the external ears, digits/nails, and breasts. It is therefore notable that both of our FND families have a phenotype that includes cutis aplasia of the scalp. Family 1 consists of a father and daughter with features including large fronto-nasal lipoma and cardiac defects (tetralogy of Fallot or patent ductus arteriosus) who both carry a heterozygous c.310G>C (p.Asp104His) variant. In Family 2 a de novo variant c.263G>A (p.Gly88Asp) is present in the proband who presented with a midline frontonasal mass and sparse hair. The occurrence of two de novo missense mutations, absent from databases of normal variation and affecting the same domain of the KCTD15 protein, in association with a clinically similar, extremely rare phenotype including frontonasal mass and cutis aplasia or sparse hair, is highly suggestive that these variants are causative of the phenotype. In collaboration with Prof Alex Bullock (Structural Genomics Consortium, Oxford) we demonstrated that the p.Asp104His substitution destabilises the pentameric assembly of both KCTD15 homodimers and KCTD15-KCTD1 heterodimers via this domain suggesting a dominant negative mode of action. Asp104 is conserved residue that makes key intermolecular contacts within the pentamer. Similarly, the Family 2 variant equivalent (p.Gly62Asp) has been identified in KCTD1/SEN syndrome and modelling suggests it may destabilise the protein structure and affect interaction with the neural crest transcription factor AP-22. Both KCTD1 and KCTD15 have been shown to repress AP2 and affect neural crest formation3-5. This is the first report of putative causative mutations in KCTD15, highlighting the critical role played by KCTD15 in tissues of neural crest and ectodermal origin.
<b>Domain Information</b> Asn104 - BTB domain The protein usually forms as a pentamer, with the BTB domain playing a key role in assembly.	<b>Functional analysis - mouse:</b> K/O: complete penetrance of preweaning lethality

Full data spreadsheet

## 2. Variant Screening Pipeline

## Clinical Advisory Board

### VUS ranking

*Priorities (in order of importance):*

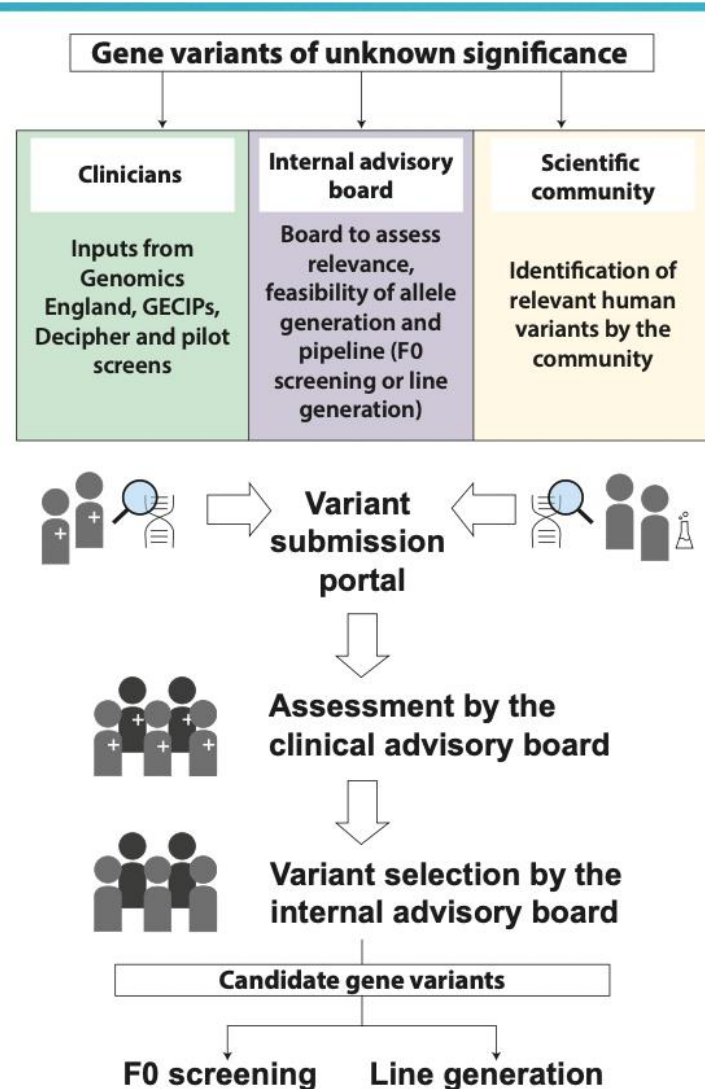

- New disease gene
- Known disease gene, but new phenotype association or novel allelic disorder
- Known disease gene with difficult to interpret VUS, eg nearby SV, deep intronic SNV
- Known disease gene where deep phenotypic investigation of the mouse model could lead to new insights into pathogenic mechanisms

### Considerations

- The clinical features should overlap with the specialities of our developmental biology team: [craniofacial](#), [skeletal](#), [heart](#), [neural tube](#), [kidney](#), [ciliopathies](#).
- We are most interested in syndromic conditions to simultaneously study multiple systems in the mouse.

# SCHEDULE

- Currently finalizing Molgenis system update:
  - Improved user-friendliness of registry
  - Creation of center and disease specific dashboards
- Workshops will be organized focused on:
  - Data entry (bulk & manual)
  - SPIDER tool
- Aim: data entry from January 2024 onwards

# REGISTRY UPDATES

- More user-friendly
- Visits coupled to patients automatically
- Automatic calculations
- SPIDER implemented

The screenshot shows a web application interface for 'Craniosynostosis workstream visits'. The top navigation bar includes the Molgenis logo and links for Home, Patients, Visit per workstream, Genetic Anomalies, Tables, and Up/Download. The breadcrumb trail is 'CRANIO / tables / Visits\_synostosis'. Below the breadcrumb, there is a title '< CRANIO / Visits\_synostosis' and a main heading 'Craniosynostosis workstream visits'. A subtitle reads 'CRANIOSYNOSTOSIS WORKSTREAM: Contains all information that was filled in for patients within the CRANIO'. The interface features a toolbar with buttons for filters, columns, download, and Table view, along with a search box and pagination controls showing '1 - 12'. The main content is a table with the following data:

# +	craniosynostosisID	typeVisit	date	suture	which_suture	syndrome
	test	0 - 1 yr of age at follow up	2023-11-02

	uytyt	Additional craniofacial surgery	2023-11-02			

# NEW HOMEPAGE AND DASHBOARD

ERN CRANIO

ERN for rare complex craniofacial anomalies and ear, nose and throat (ENT) disorders

## Welcome to ERN CRANIO Registry

The ERN CRANIO registry is the European registry focused on the outcome of treatment using standardised diagnosis specific outcome sets (starting with craniosynostosis and cleft lip/palate) - including patient reported outcome measures and outcomes on patients' quality of life.

# RESEARCH IDEA TO PUBLICATION – ERN CRANIO

- How can you start performing research within ERN CRANIO?

## **Become eligible for ERN CRANIO research:**

- Find participants during annual meetings
  - Workstream wide studies without patient data (e.g. questionnaire to clinicians)
- Study with patient data (without registry)
  - Only with participating centers that gave consensus for data use
- At least two ERN CRANIO centers (Ideal=from at least two countries)

# RESEARCH TOPICS

- **Annual meetings to discuss research**
- Researchers present research ideas
  - Relevance of research
  - Feasibility
  - Which centers will participate
  - Keep overview of completed and ongoing research

# CONTACT

- Questions on the registry or dashboard
  - [ern-cranioregistry@erasmusmc.nl](mailto:ern-cranioregistry@erasmusmc.nl)

# Technician meeting

# Technician meeting outcomes 1/3

- Mainly focused on research applications, which indirectly finds its way to clinical practice fundamental findings and published results.

Hopefully, also on direct use (e.g., surgical planning, severity assessment).

- Need for automation of the pipeline from raw to interpretable data
  - Need for standardized data structure with attributes to ease data collection in collaborative studies. Some solution already exist in some centers (e.g., Tübingen).
- Sharing within ERN might present risks in patient's data leakage: this must be addressed in details. Especially, more control on our data may be possible if all centers use the same anonymisation method.

# Technician meeting outcomes 2/3

- Maintenance of database should be anticipated on the long term. Get inspiration from already existing platforms like FaceBase.
- Consider also include 3D soft-tissue reconstruction from CT scans.
- Setting global agreement within ERN as soon as possible. Is certification mandatory in the case where data is directly used for clinical decision?
- Standardize timing of data acquisition throughout patient's management (pre, per, postop).

# Technician meeting outcomes 3/3

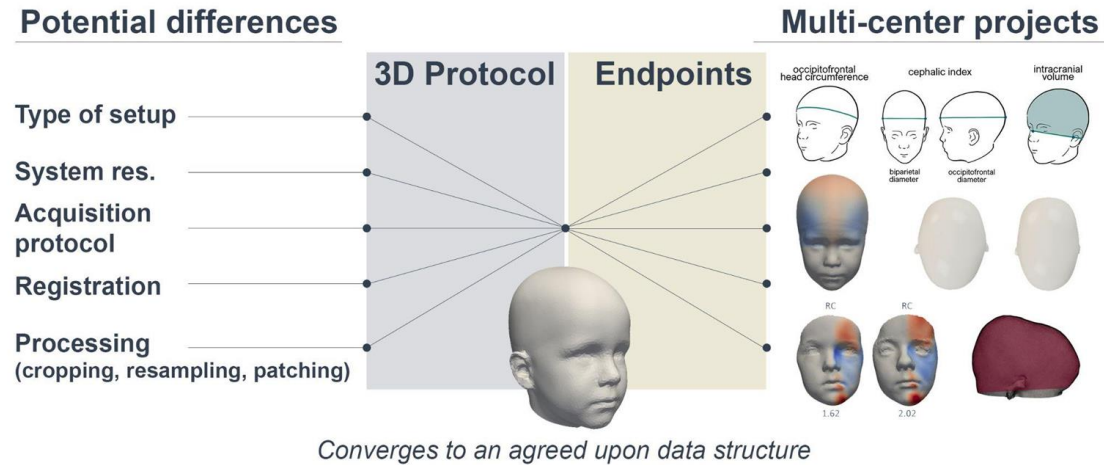

- Involve photographer (or person responsible for acquisition) in research projects
- Download files as .ply or .obj, which embed texture information
- Naming conventions, for example:  
    PatientID\_DoB\_AcqDate [YYYY\_MM\_DD]
- Contact local IT dept about storage and accessibility solutions
- Storage of 3D data for clinical use could be done as 3D PDF.

# Work packages 3D group

- 2024.1 Legal
- 2024.2 Research methodologies
  - Registration method*
  - Reference planes / templates*
  - ...
- 2024.3 Accuracy validation (different setups)  collaborative paper
- 2024.4 Writing of Guidelines → aimed to present next ERN
- 2024.5 Data sharing and storage opportunities
- 2024/25 Software / tool development

# Discussion

# Discussion

What further endpoints do you foresee and are there topics that should be further explored collaboratively (with the technicians)?

Say that we start a collaborative project today, with 10 centers. What challenges will we face when we consider the data?

What are key steps to include we have missed or should consider?

What do you think are the most important sources of variability that may influence the outcomes?

What are key elements that you would like to see in the ERN protocol for 3D imaging?

# **REDO SURGERY FOR SAGITTAL SYNOSTOSIS; REDO AFTER REDO**

ERN Cranio Dublin

17 November 2023

# INCIDENCE REDO FOR SSS IN LITERATURE

- **First redo for raised ICP: 1.4-23.5% depending on follow-up time and technique**
- **No studies on recurrent raised ICP after second cranial enlargement**

Moore et al. 2021

23.5%, 5.6%, 3.2% and 1.9% of secondary raising ICP patients who underwent the primary surgery between 1999–2004, 2005–2010, 2011–2015 and 2016–2018, respectively (p 0.024).

*No details on ICP monitoring*

Thomas et al. 2015

The overall incidence of raised ICP following corrective surgery for SC in this study was 6.9%; among MSC treated patients the rate was 14.6%. This is higher than the 1.4%–3.8% rate reported in other series of patients undergoing strip craniectomy.

*ICP monitoring baseline consistently above 15 mmHg*

Cetas et al. 2013

Five (6.2%) of 81 children with repaired, nonsyndromic, single-suture (sagittal) synostosis later presented with delayed intracranial hypertension and underwent a second cranial vault remodeling.

*ICP measurements: >15mmHg*

# INCIDENCE REDO ROTTERDAM

**1991-2022**

**Total operated: 749**

<b>Cranial remodeling</b>	<b>17</b> (14 ICP increase= 1,9% (1-6% depending on technique))
<b>Split skull graft</b>	<b>13</b>
<b>Repositioning springs</b>	<b>1</b>
<b>Completing craniotomy</b>	<b>1</b>
<b>Post op hemorrhage</b>	<b>1</b>
<b>Dural defect closure</b>	<b>2</b>
<b>Scar correction</b>	<b>2</b>

# RECURRENT SYMPTOMS AFTER REDO

SD boy 11 y

**Redo at age 14m** (frontobiparietal)  
for asymmetry after incomplete craniotomy (springs)  
No genetic deficiencies

**Second redo at age 8y** (biparietal)  
for skull growth stagnation  
complaints of headache, not thriving at school  
borderline ICP measurements.

**Third redo at age 11 y** (occipital with ext distractors)  
recurrence of complaints of headache etc.

6m after first redo

5y after first redo

# RECURRENT SYMPTOMS AFTER REDO

MR boy 12 y

**Redo at age 3y** (frontobiparietal)

After endoscopic strip and cosmetic redo elsewhere  
Fontanel buldge, papilledema  
10p13 deletion of unknown relevance

**Second redo at age 5y** (biparietal)

for skull growth stagnation  
complaints of headache, not thriving at school  
borderline ICP measurements.

**Third redo at age 10 y** (occipital with ext distractors)

postop perfect  
after 1 ½ yr recurrence of complaints of headache etc.

*ICP: prone 10-15 mmHg, at end of the night 20mmHg  
3 REM peaks 10 minutes, 20-30mmHg*

MRI at age 12

# RECURRENT SYMPTOMS AFTER REDO

N=3

First redo at early age for  
cosmetic reasons  
raised ICP  
(No genetic deficiencies)

Second (and third) redo for  
skull growth stagnation  
complaints of headache, not thriving at school  
borderline ICP measurements.  
*Surgery helps for 1-2 years....*

# IS THIS PROBLEM RECOGNIZED?

**Do other centers see comparable patients?**

**What could be the origin of the recurrent problems?**

**wrong decision to do re-expansion?**

**reduced growth due to repeated surgeries?**

**too big/small enlargement at first redo?**

**Would it be worthwhile to collect (second) redo patients within ERN centers?**

# PATIENT PARTNERSHIP IN ERN CRANIO

---

17 November 2023

Dublin, Ireland

# CONTENT

---

- ❖ Introduction to EURORDIS Patient Partnership Framework
- ❖ Guiding principles of the Framework
- ❖ Patient-clinician collaborations in ERN CRANIO
- ❖ Ideas for collaboration?

# INTRODUCTION TO EUORDIS PATIENT PARTNERSHIP

---

Patient partnership in the ERNs can be defined as a **mutual relationship** between patients and health professionals where input from people living with a rare disease or caring for someone with a rare disease **routinely and formally** informs the Networks' collaborative activities and decision-making.

Patient partnership implies considering health professionals and patients involved in the Networks as **equal partners** in all ERN activities and domains.

# GUIDING PRINCIPLES

## MUTUAL RESPECT

Patients and health professionals respect each other, communicate openly, and actively listen to each other. Everyone can openly express their needs, perspectives, and concerns without fear of reprisal.

## LEARNING

Patients and health professionals are open to learn about how things may improve and are open to learn from each other.

## TRANSPARENCY

Patients and health professionals are transparent about knowledge gaps and about the challenges and constraints that they might face in partnering effectively in the Network.

## COMPLEMENTARITY

There is a mutual recognition of the complementarity of scientific, professional, and experiential knowledge that health professionals and patients bring to the table. Both act in ways that demonstrate the value of the input provided by the other party.

## SHARED LEADERSHIP

Everyone is aware of the Network's goals and feels empowered to make proposals and take the lead on projects based on their expertise. Patients and health professionals jointly shape and lead the work of the Network and have a shared responsibility for the Network's performance.

## TEAMWORK

Patients and health professionals work together from the beginning to set priorities, agree on activities, identify gaps and needs, and cooperate to develop solutions and projects.

## PROFESSIONALISM

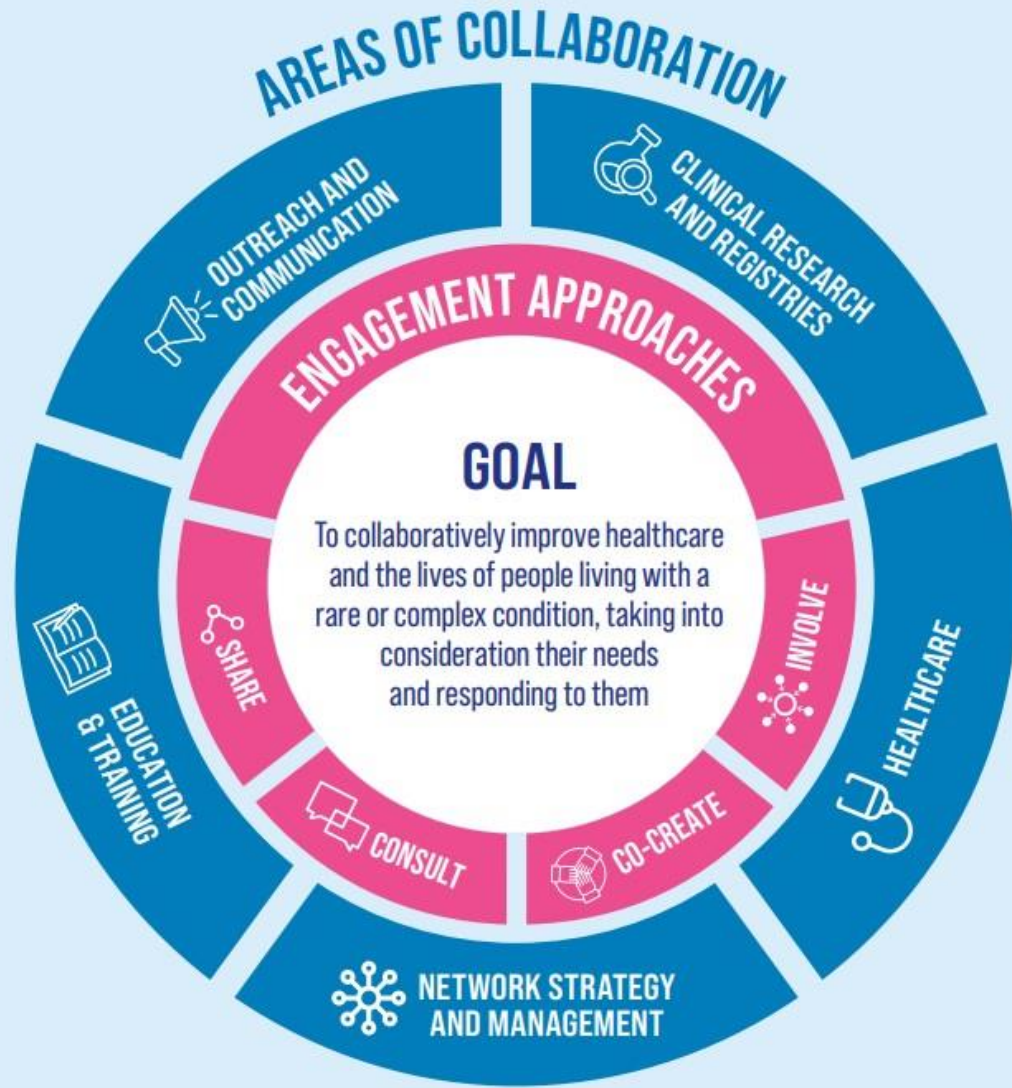

Patients and health professionals live up to the commitment they have made to contribute to the Network, communicate regularly, and report on the progress of ERN-related projects.

## CONTINUOUS INVOLVEMENT

Patients and health professionals work together from the beginning in all ERN collaborative activities and projects.

## CLARITY OF ROLES AND RESPONSIBILITIES

The Network has clearly defined the roles, core tasks and responsibilities of patients and health professionals and everyone is kept updated. Health professionals are aware of the different roles of individual patients and of patient representatives that represent a wider community when collaborating with them.

# AREAS OF COLLABORATION

01

## Network strategy and management

Patients and health professionals discuss and agree on the priorities of the Network, including resource allocation

02

## Healthcare

Development of care pathways, clinical practice guidelines, evidence reports, clinical consensus statements and other tools to support healthcare delivery and disease management

03

## Education and training

Development of joint educational and training activities, bringing complementary knowledge and experience from clinicians and patients

04

## Clinical research and registries

Good examples (e.g. the revision of Orphanet's rare diseases classification and the development of ERNs registries)

05

## Information and outreach

Creation of education and informational resources, identifying knowledge gaps, outreach and awareness raising activities among the RD community and beyond.

# PATIENT-CLINICIAN COLLABORATIONS IN ERN CRANIO

---

- ❖ Video on genetics → collaboration with geneticists
- ❖ Research collaborations
- ❖ Communication materials on visible differences → collaboration with psychologists
- ❖ Guideline and consensus statement development → clinical & patient versions
- ❖ Patient-clinician engagement group
- ❖ National collaboration

# EXAMPLE 1. VIDEO ON GENETICS

---

Goal: to inform patients and parents about the genetics underlying their condition.

Development of 3 videos:

1. Genetics & inheritance
2. Genetics in craniosynostosis
3. Genetic counseling

# EXAMPLE 1. VIDEO ON GENETICS & INHERITANCE

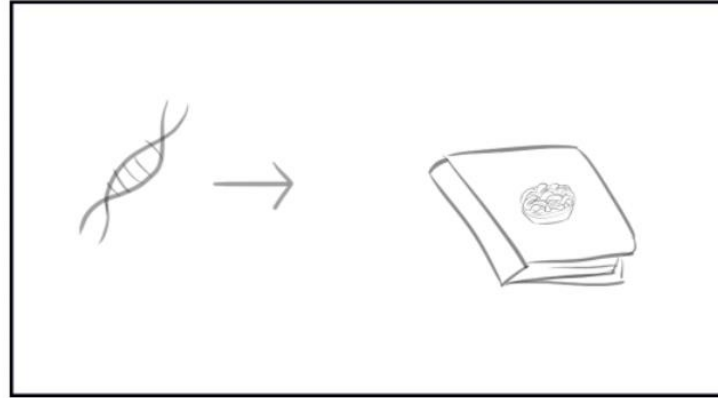

Knowing the cause, may be important for you and your family members.

Family appears next to the baby thinking about the cause

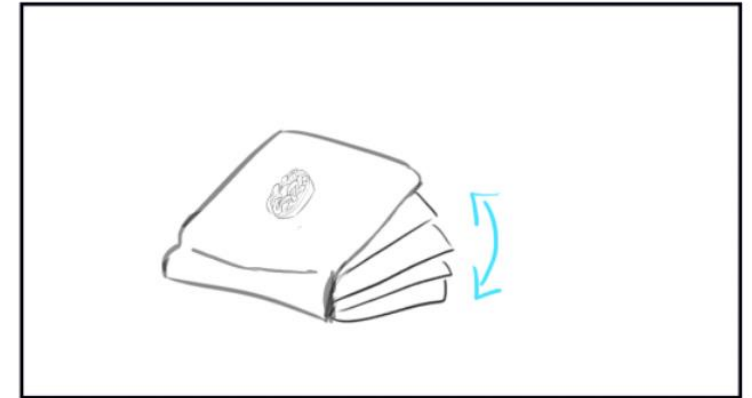

Swipe up to DNA string

## Draft storyboard of the first video: GENETICS & INHERITANCE

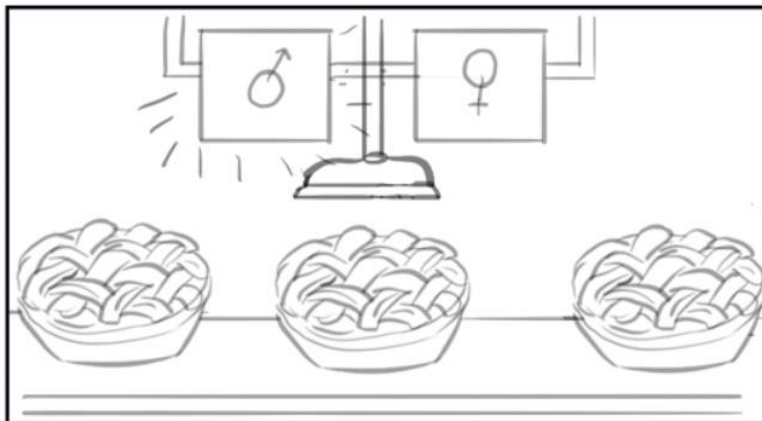

Imagine our genetic makeup as a personal cookbook.

DNA string transforms into a cookbook.

While genetics is a deeply intricate topic, think of each of us having our own unique apple pie recipe as an analogy to help clarify.

The book opens

Think of autosomal dominant inheritance as a dominant ingredient in the pie. If you inherit this specific ingredient from just one parent, it will significantly influence the pie's flavor.

We are in a factory where the pies are getting different flavours.  
The signs of male or female also light up.

Each time this pie is baked, there's a 50% chance it'll have this distinct taste. Regardless of whether the pie is large or small, the flavor remains consistent.

Pies now have different shapes and sizes but only 50% of them have a different taste.

A cookbook

&

apple pie

# EXAMPLE 2. RESEARCH COLLABORATION

## WHICH PATIENT TO ASK?

**Table 2** Matching researchers questions and needs, and patients strengths and limitations: recommendations\* and arguments

Researcher's question	Lived experience Christine (see table 1)	Personal story William (see table 1)	Collective perspective Anouk (see table 1)	Patient research Partner Samira (see table 1)
What is your personal experience of living with this disease?	+ May be too early	++ Perfect match	+ Good match	- May know others who are better suited
What is your personal experience with the diagnosis?	++ Recent unarticulated experience	++ Recent, more articulated experience	- Personal experience with diagnosis may be outdated.	-- Personal experience with diagnosis will likely be outdated.
Can you read and understand the Patient Information Folder?	++ Perfect match	+ Good match	- May be too knowledgeable, loss of the naive patient experience. Could ask other patients.	-- Too knowledgeable, has learnt research language. Could ask other patients
Do you think other patients are willing to be included in my study (as participants)?	- Doesn't know other patients	- Doesn't know other patients	++ Collective perspective: may not fully understand the study	++ Collective perspective: may understand the study
Is my research question relevant for this patient group?	-- Doesn't know other patients (speaks to personal opinion only)	-- Doesn't know other patients (speaks to personal opinion only)	++ Collective perspective	++ Collective perspective May be aware of patients' research priorities
What are important outcomes that I should include in my study?	-- Doesn't know other patients	-- Doesn't know other patients	++ Collective perspective	++ Collective perspective May be aware of patient relevant outcomes
Can you comment on my research proposal?	-- Doesn't know other patients; not research ready.	-- Doesn't know other patients; not research ready.	+ Collective perspective, may not understand the proposal.	++ Collective perspective, may understand the proposal.
Are you willing to be an equal member of the research team?	-- Doesn't know other patients; not research ready.	-- Doesn't know other patients; not research ready.	+ Collective perspective, not research ready; could join together with a more experienced patient.	++ Collective perspective; research ready.
Could you act as a 'critical friend' and push back on the research team if necessary?	-- Grateful to be included; not sure of good/bad partnership yet; not research ready.	-- Grateful to be included; not sure of good/bad partnership yet; not research ready.	- Grateful to be included; not sure of good/bad partnership yet; not research ready.	++ Understands more about being on a research team. Able to review critically and give constructive feedback. Ok to push back on research team

-- Strong recommendation not to engage.

- Weak recommendation not to engage.

+ Weak recommendation to engage.

++ Strong recommendation to engage.

\*Recommendations (starting points for discussion or interview, no strict directives).

# EXAMPLE 2. RESEARCH COLLABORATION

		ROLE IN PROJECT/RESEARCH				
Phase	Activities	Listener Is given information	Co-thinker Is asked to give opinion	Advisor Gives (un)solicited advice	Partner Works as an equal partner	Decision-maker Takes initiative, (final) decision
Preparation	Support in writing of proposal by board member of LAPOSA		x			
	Defining outcome measures			x		
	Writing study information material for parents			x		
Execution	Interim analysis review on outcomes		x			
	Re-writing the chapter of the guideline				x	
Implementation	Re-writing the patient-version of the adapted guideline chapter				x	
	Adapting the courses for referring care providers			x		
	Adapting the LAPOSA patient-information					x

From project:  
**Comparing effectiveness of a conservative policy to craniofacial surgery in children with trigonocephaly**

**Erasmus Medical Center Rotterdam Netherlands**

# BRAINSTORM

---

Any ideas for collaboration?

# QUALITY OF LIFE ASSESSMENTS

Marizela Kljajić

Psychologist, PhD.

Gothenburg Craniofacial Unit

# What is Quality of Life?

- A multidimensional *construct* that considers physical, mental, and social components
- Describes well-being depending on number of factors
  - duration and severity of illness?
  - medication? Stressful events?
- Subjective concept

# Why should we care about QoL?

- Treating a patient aims to improve QoL
- The QoL could be affected by the condition but could also be affected by the treatment itself
  - e.g. surgery is painful
- Unless life-saving, what is the indication for treatment?

# How can we measure QoL?

- Questionnaires
- Generic and disease-specific
- Available for craniofacial conditions: FaceQ
- Psychometric properties (reliability, validity, norming?)

In the past **ONE month**, how much of a **problem** has this been for you ...

About My Health and Activities (problems with...)	Ne	A	S	O	AI
1. It is hard for me to walk more than one block	0	1	2	3	4
2. It is hard for me to run	0	1	2	3	4
3. It is hard for me to do sports activity or exercise	0	1	2	3	4
4. It is hard for me to lift something heavy	0	1	2	3	4
5. It is hard for me to take a bath or shower by myself	0	1	2	3	4
6. It is hard for me to do chores around the house	0	1	2	3	4
7. I hurt or ache	0	1	2	3	4
8. I have low energy	0	1	2	3	4

About My Feelings (problems with...)	Ne	A	S	O	AI

### About Your Health

Thinking about the last week...

1. Have you felt fit and well?	not at all	slightly	moderately	very	extremely
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
2. Have you felt full of energy?	never	seldom	quite often	very often	always
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
3. Have you felt sad?	never	seldom	quite often	very often	always
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
4. Have you felt lonely?	never	seldom	quite often	very often	always
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
5. Have you had enough time for yourself?	never	seldom	quite often	very often	always
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
6. Have you been able to do the things that you want to do in your free time?	never	seldom	quite often	very often	always
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
7. Have your parent(s) treated you fairly?	never	seldom	quite often	very often	always
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
8. Have you had fun with your friends?	never	seldom	quite often	very often	always
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
9. Have you got on well at school?	not at all	slightly	moderately	very	extremely
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
10. Have you been able to pay attention?	never	seldom	quite often	very often	always
	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

In general, how would you say your health is?

- excellent
- very good
- good
- fair
- poor

Figure 1/UK (English) EQ-5D-5L Paper Self-Complete (sample version)

Under each heading, please tick the ONE box that best describes your health TODAY.

#### MOBILITY

- I have no problems in walking about
- I have slight problems in walking about
- I have moderate problems in walking about
- I have severe problems in walking about
- I am unable to walk about

#### SELF-CARE

- I have no problems washing or dressing myself
- I have slight problems washing or dressing myself
- I have moderate problems washing or dressing myself
- I have severe problems washing or dressing myself
- I am unable to wash or dress myself

#### USUAL ACTIVITIES (e.g. work, study, housework, family or leisure activities)

- I have no problems doing my usual activities
- I have slight problems doing my usual activities
- I have moderate problems doing my usual activities
- I have severe problems doing my usual activities
- I am unable to do my usual activities

#### PAIN / DISCOMFORT

- I have no pain or discomfort
- I have slight pain or discomfort
- I have moderate pain or discomfort
- I have severe pain or discomfort
- I have extreme pain or discomfort

#### ANXIETY / DEPRESSION

- I am not anxious or depressed
- I am slightly anxious or depressed
- I am moderately anxious or depressed
- I am severely anxious or depressed
- I am extremely anxious or depressed

# What information can measures give?

- What are they actually measuring?
- For how long is the assessment valid?
- Who is the respondent? Parent, mother or father, both?  
Child?

# Important aspects to consider

- Is the questionnaire appropriate for your patients?
- Is it a valid questionnaire, do we know if it measures what we intend to measure?
- Does the questionnaire include self-report (pediatric)?
- Are we using it to help identify patients with needs or to evaluate the care that we provide?
